

Glue Gun Reusable Stencils

WHAT'S NEEDED

Westcott Hot Glue Gun and Glue Sticks
Foil Paper

STEPS

STEP ONE

Plug in your Glue Gun and wait for it to heat up. The Westcott Glue Gun nozzle turns red when it's heated up, (you don't have to touch it to know when it's heated, yay for your fingers).

STEP TWO

On a foil paper, make any design you'd want using hot glue and wait for it to dry. Gently peel off the stencil from the foil paper once it dries and you're ready to use it.

STEP THREE

Place it flat on a surface and use paint to create your design. It's best to lay the stencil on the flat side, the side that was lying on the foil.
